

### 6.14 Practice

For each integral, determine what technique would be useful to solve them. (For additional practice, solve the integral.)

1.  $\int \frac{a^3 - 1}{a^2 + 1} da$

**Solution:** Long division

Answer:

$$\frac{1}{2}a^2 - \frac{1}{2}\ln(a^2 + 1) - \arctan a + C$$

2.  $\int \frac{1}{x^2 + 2x + 2} dx$

**Solution:** Complete the square

Answer:

$$\arctan(x + 1) + C$$

3.  $\int \frac{x}{x^2 + 2x + 2} dx$

**Solution:** Complete the square, split the integral

Answer:

$$\frac{1}{2}\ln|x^2 + 2x + 2| - \arctan(x + 1) + C$$

4.  $\int \int \frac{x + 1}{x^2 + 2x + 2} dx$

**Solution:** Logarithmic integration (substitute  $u = x^2 + 2x + 2$ )

Answer:

$$\frac{1}{2}\ln|x^2 + 2x + 2| + C$$

5.  $\int \frac{x - 1}{x^2 + 2x + 3} dx$

**Solution:** Complete the square, split the integral, scale to get an arctan integral

Answer:

$$\frac{1}{2}\ln|x^2 + 2x + 3| - \sqrt{2}\arctan\left(\frac{x + 1}{\sqrt{2}}\right) + C$$

6.  $\int_0^1 t(1-t)^{10} dt$

**Solution:** Substitute  $u = t - 1$

Answer:

$$\frac{1}{132}$$

7.  $\int x(x-1)(x-2) dx$

**Solution:** Expand

Answer:

$$\frac{1}{4}x^4 - x^3 + x^2 + C$$

8.  $\int_1^3 r\sqrt{r^2-1} dr$

**Solution:** Substitute  $u = r^2 - 1$

Answer:

$$\frac{16\sqrt{2}}{3}$$

9.  $\int_e^{e^2} \frac{1}{x \ln x} dx$

**Solution:** Substitute  $u = \ln x$

Answer:

$$\ln 2$$

10.  $\int_0^{\pi/6} \frac{\cos \theta - \cos^3 \theta}{\sin^2 \theta} d\theta$

**Solution:** Algebraic manipulation: trig identity and simplifying the fraction

Answer:

$$\frac{1}{2}$$

11.  $\int_{-2}^2 x^3 \sin(x^2 + 1) dx$

**Solution:** Odd function over a symmetric interval, or use substitution  $u = x^2 + 1$ 

Answer:

$$0$$

12.  $\int \frac{1}{\sqrt{u}e^{\sqrt{u}}} du$

**Solution:** Substitute  $x = \sqrt{u}$ 

Answer:

$$-2e^{-\sqrt{u}} + C$$

13.  $\int \frac{1}{\sqrt{1-x-x^2}} dx$

**Solution:** Complete the square

Answer:

$$\arcsin\left(\frac{2x+1}{\sqrt{5}}\right) + C$$

14.  $\int \frac{2^{\sin \theta}}{\sec \theta} d\theta$

**Solution:** Substitute  $u = \sin \theta$  and use  $\frac{1}{\sec \theta} = \cos \theta$ 

Answer:

$$\frac{2^{\sin \theta}}{\ln 2} + C$$

15.  $\int_{-2}^2 (x + x^2 + x^7 + \sin x) dx$

**Solution:** Most of this is an odd function over a symmetric interval, then an easy integral of  $x^2$ 

Answer:

$$\frac{16}{3}$$
